Book on Advanced Photon Counting | PicoQuant Photon counting is a unified name for the techniques using single-photon detection for accumulative measurements of the light flux, normally occurring under extremely low-light conditions. Nowadays, this approach can be applied to the wide variety of the radiation wavelengths, starting from X-ray and deep ultraviolet transitions and ending with far-infrared part of the spectrum. Combining spectrum and lifetime provides a “fingerprint” for identifying such molecules in the presence of a background. Advanced Photon Counting | SpringerLink Advanced Time-Correlated Single Photon Counting Applications Wolfgang Becker (eds.) This book is an attempt to bridge the gap between the instrumental principles of multi-dimensional time-correlated single photon counting (TCSPC) and typical applications of the technique. Advanced Time-Correlated Single Photon Counting Applications Advanced Time-Correlated Single Photon Counting Applications. Editors: Becker, Wolfgang (Ed.) ... its interaction with optical imaging methods and its application to a wide range of experimental tasks in life sciences and clinical research. ... Advanced Time-Correlated Single Photon Counting Applications. Advanced Time-Correlated Single Photon Counting Applications A photon-counting detector works by counting the number of photoelectric interactions observed during the exposure time. Count registers associated with each pixel are read at the end of the exposure time, thus making the output of photon-counting detectors a collection of pixel counts. Computational Methods for Photon-Counting and Photon ... The largest single application of TCSPC at this time is FLIM, using a laser scanning confocal microscope and a high rep rate pico- or femtosecond laser such as a pulsed diode for one-photon or a Ti: Sapphire laser for two-photon excitation. Another hot topic is Fluorescence Correlation Spectroscopy
