Hearing Loss Research At Niosh In

In addition to damaging workers' quality of life, occupational hearing loss carries a high economic price to society. NIOSH

Recommendations: The NIOSH Recommended Exposure Limit (REL) for occupational noise exposure is 85 decibels, A-weighted, as an 8-hour time-weighted average (85 dBA as an 8-hr TWA) using a 3-dB exchange rate. Exposures at or above this level are considered

hazardous. Noise and Hearing Loss Prevention | NIOSH | CDC NIOSH

Research Programs. NIOSH is involved in a range of occupational safety and health activities including surveillance, research and

Details Prevalence of Hearing Loss

among Noise ... Occupational

hearing loss is preventable. For

general occupational hearing loss

prevention, NIOSH recommends

removing or reducing noise at the

source using the hierarchy of

controls, and when noise cannot be

reduced to safe levels,

implementing an effective hearing

conservation program. In the

Services sector, additional research

and surveillance are needed for sub-

sectors for which there is low

awareness of hearing hazards or a

lack of hearing data. New Study

workplace. Workplace Noise: More
than just “All Ears” | | Blogs |
CDC Research has shown that
exposure to certain chemicals in
the workplace may also negatively
affect how the ear functions,
potentially causing hearing loss or
balance problems, regardless of
noise exposure. Substances
containing ototoxicants include
certain pesticides, solvents, metals
and pharmaceuticals.
